

Tensile (Compression) Testing Machine

A tensile tester for industries of high-molecular, food, packing, electron and textile.

This computer servo tensile(compression) testing machine is the most popular type. the testing machine can be used for tensile test, compress test,bend test...etc. Attachments such as extensometer, extra load cell, oven or environment chamber are very powerful for special test.

This instrument is coating with "Static Electricity", able to keep good and shining appearance; The material testing machine is suitable for trading company, ordinary company, factory, and all industries.

For physical experiment of all material and finished products, semi-products and specimen; by change fixtures the tester can do all kinds of material test, such as tensile test, elongation, anti-compress, tearing, peeling, adhesive, stress, strain, shearing, etc.

The testing machine can connect together with Powerful software function, user can make the following action according to test result: 1. Statistics charts 2. Data table 3. Print out 4. Compare various data.The precision test equipment evaluates material test and provide reliable data.Simply to operate,this compression tester meet your any test requirements.

Tensile (Compression) Testing Machine

Accessory for Testing Machine

Specifications:

- Max Capacity:10kn(1000kg)
- Max Travel:800mm
- Max Space:400mm
- Test Speed:1~1000mm/min
- Force Resolution:1/100,000
- Controller:Computer
- Power:Single Phrase, 220V,3A
- Dimension:110 x 58 x 192 (H)cm

Features:

- Branded product.
- Buyer's label offered.
- Sample purchase.

Certificate: CE

Ordering information:

- Minimum Order: 1
- FOB: Taiwan
- TEL: 886-4-25297441
- FAX: 886-4-25297324
- E-mail: info@come-tech.com.tw
